#### **Preface**

#### **Unemployment Insurance Program**

The purpose of Idaho's unemployment insurance (UI) program is to replace a portion of an eligible individual's wages on a temporary basis when they lose a job due to no fault of their own. The Idaho Unemployment Insurance Financing, Benefit Costs and Experience Rating Report provides information about the structure, development, history and current status of Idaho's unemployment insurance program. The report can be used as a reference on benefit costs, benefit financing and experience rating using the latest available data up to the time of publications.

# **Unemployment Insurance Trust Fund**

#### **General Principles**

The trust fund financing system attempts to forward fund the insurable unemployment risk. The overriding principle of building a trust fund to pay unemployment insurance benefits is that fund reserves should be adequate during periods of economic health to pay benefits during economic downturns. Keeping the trust fund balance high enough to maintain fund solvency during recessionary times while avoiding tax increases is the ideal goal of the unemployment insurance system.

Ideally, this system should be countercyclical. When the economy experiences a downturn, a drawdown of the fund occurs because of increased unemployment benefit payments while tax revenues flowing into the fund decrease. Conversely, as payrolls expand during periods of relative economic health, benefit payments decrease while tax revenues flowing into the fund increase. In Idaho, countercyclical taxation is somewhat achieved through the lag-time built into the tax system. But countercyclical taxation is only effective if recessions are relatively short or moderately severe. For the first time in state history, the 2007 Great Recession tested the boundaries for solvency of the trust fund, sending the fund balance into negative territory in 2009 until short-term federal loans brought it back into solvency in 2010. Idaho issued bonds to pay off the federal loans in August 2011 and repaid those bonds by August 2015 before interest charges and other tax credit reductions were to take effect, effectively preventing negative tax rate outcomes for experiencedrated employers. Since then, the fund has consistently ranked as one of the most solvent trust funds in the nation. By the end of 2021, the fund had recovered with enough reserves (Table 1) to sustain an economic downturn lasting 15.6 months.

The fundamental issue is the size of the trust fund reserve to meet a potential drawdown in a recessionary economy. The absolute dollar balance of the trust fund has little value in determining the financial health of the fund. The balance must be assessed relative to known actuarial variables such as the high-cost multiple, average high-cost multiple and the ratio of the fund to total wages. Idaho uses the average high-cost ratio of the past 20 years as the barometer of solvency.

Figure 1 shows the fund was relatively strong up to 2005 despite a legislated freeze of tax rates. The tax freeze ended in 2004 with the 2005 rewrite of Idaho's

\*2010 Includes borrowed federal money

unemployment law that resulted in a substantial tax reduction for most experience-rated employers.

The trust fund balance was at a high point in 2000, preceding the three-year tax freeze and the revision of the law. This revision lowered the target for a healthy fund by requiring a balance equal to 80% of the average benefit cost in the highest three of the most recent 20 years. While the rewrite of the law significantly lowered employer contributions, the strength of the trust fund dramatically decreased to unsustainable levels in 2009.

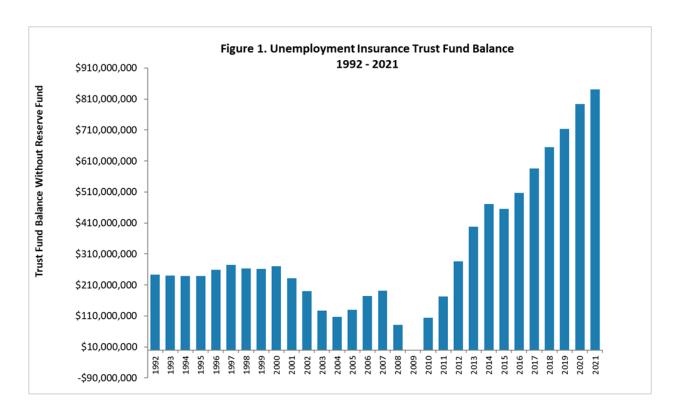

As a requirement from the bond markets to demonstrate the ability to repay, legislative action in 2010 rebuilt the level of solvency by adjusting the formula's solvency multiplier from 0.8 to 1.5 in annual increments of one-tenth at a time. The first multiplier increment increase from 0.8 to 0.9 took effect in 2012. Increases continued until the multiplier reached 1.4 in 2017. In 2018, Idaho code fixed the multiplier at 1.3 where it has remained since.

Throughout the years the fund has fluctuated up and down responding to economic expansions and contractions. As a reference point, up to the early 2000s the fund maintained a consistent balance in the \$200 million range for a relative small employer base of 9,100. By 2005 the employer population grew by 70% to 15,500.

For the following 15-year period to 2021, the employer base grew to 67,600 or 334%, while the fund responding to the increased demand for coverage rapidly reached the \$800 million range necessary to maintain the solvency necessary to sustain the unprecedented employment growth during this period. By August 2022, the number of active employers with unemployment insurance coverage reached 76,320.

In the calculation of tax rates, the UI Trust Fund is the combination of the Employment Security Fund, managed by the U.S. Treasury (Figure 1) and the Idaho reserve fund, managed by State Treasury. The fund managed by U.S. Treasury is dedicated exclusively to pay for benefits while the reserve fund serves as a backup to finance the federally held fund if necessary.

Earnings from investing the federally held fund are deposited back into the fund while earnings generated from the Idaho reserve fund are deposited into the Special Administration Account. The Special Administration Account was created by the Legislature in 1991 and is used to supplement declining federal grants to operate unemployment Insurance, employment services and other Labor programs. The balance of the reserve fund, which fluctuates with the markets, was about \$200 million in 2022.

#### **High-Cost Multiple**

Both wages and unemployment insurance benefits are dynamic, especially during periods of inflation, and the potential liability to the trust fund cannot be gauged by an absolute dollar amount. The premise of the high-cost multiple is to maintain a high enough balance to be able to pay the average of the three highest cost years of the previous 20 calendar years.

In 2005, Idaho legislated the average high-cost multiple as the measure of strength for the fund's solvency but reduced the ability of the system to collect more than 80% of the recommended revenue this new desired solvency measure would require. Since the average high-cost multiple is a two-year lagging indicator, it was not until 2008 that a rapid decline in fund solvency began showing under this measure. Additionally, high costs from the 1980s recession started to drop from the calculation of the average of the three high-cost years of the last 20, which further understated the need for revenues.

The unintended consequence of the new tax formula was that it could not prevent fund depletion from most economic deterioration scenarios.

Furthermore, the 0.8 multiplier reduced the capacity of the unemployment program to maintain a solvent fund but it was not until 2010 that subsequent legislation fixed the solvency shortcomings of the 2005 law and brought the trust fund to acceptable actuarial practices.

# **Ratio of Fund to Wages**

The ratio of the fund to total wages is a relative measure of fund adequacy. The rationale of this measure is that as total covered wages increase, the potential liability to the fund also increases because of employment growth and wage inflation.

#### **Fund Adequacy by Criteria**

Table 2 provides historical data on the fund's adequacy criteria from 1991 through 2020. This metric may lag by up to two years to the time of publication. The fund adequacy dropped significantly in 2009, ultimately reaching its lowest possible point: a zero balance. By 2021 these two metrics have since bounced back reflecting a solvent trust fund.

|      | Table 2. Trust Fund Adequacy Criteria  |                             |   |  |                             |  |  |  |  |  |

<sup>0.0392</sup> \*AHCM (average high cost multiple) and HCM (high cost multiple) are Year-in-Effect ratios using finalized data from two years prior.

<sup>\*</sup> AHCM and HCM are lagging metrics, example: ratios from 2020 are used in 2021 to compute tax rates to be in effect over the 2022 calendar year.

# **Factors Significantly Affecting Insurance Costs and Tax Rates**

#### **Average Annual Wage**

In 1976, the unemployment insurance taxable wage base was indexed to total wages. The taxable wage base is the maximum amount of each employee's wages that are taxable each year. For computational purposes this amount is derived from dividing total experience-rated wage by total experienced-rated employment.

#### Average Weekly Wage and Average Weekly Benefit Amount

The annual weekly wage when divided by 52 produces what is known as the average weekly wage. This metric reflects the average weekly wages paid by experienced-rated and cost reimbursable employers combined, excluding wages from federal employment.

The average weekly wage is used to determine the maximum weekly benefit amount for new claimants. For the historical series, see Figure 2 and Table 3.

The maximum weekly benefit amount a claimant can receive is 55% of the average weekly wage. For 2022 this amount was set at \$499 or 55% of the average weekly wage as derived from the average weekly wage from the year 2020 which was \$908.47.

In 2020 the pandemic caused an unusually high number of lower income workers to lose their jobs and since unemployment insurance benefits are determined based on earnings, an unprecedented number of claimants received a lower-than-average unemployment insurance benefit amount causing a dip in the overall average weekly benefit amount.

The relationship between the average weekly wage and the average weekly benefit amount is important in that it shows the degree to which average benefits replace average wages.

The average weekly benefit amount for all claimants during 2021 was \$327.25, up 18.1% from the previous year.

In 1992, the maximum weekly benefit amount was indexed to 60% of average wages. In 2005, the maximum benefit amount was indexed to tax rates and began fluctuating from 52% to 60% as tax rates moved up and down. In 2018, the maximum weekly benefit amount was fixed to 55% of average weekly wages.

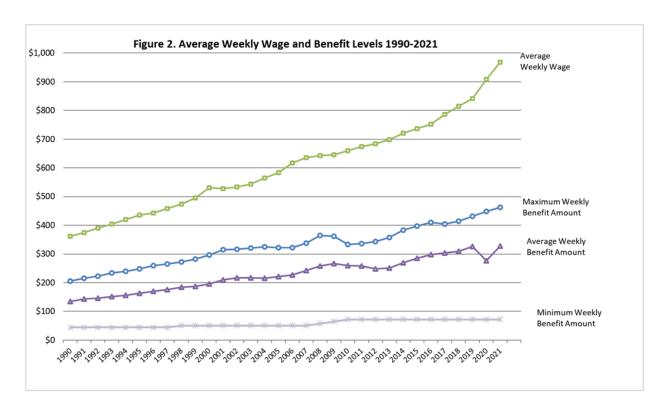

The ratio between the average weekly benefit amount and the average weekly wage represents the average wage replacement a claimant receives in benefits. Table 3 shows this ratio decreased in 2020. This is due to the impact of the pandemic, when a larger-than-normal number of benefit claimants received lower-than-average weekly benefit amounts. In 2021, the ratio recovers from the dip experienced in 2020 to a level more in line with normal trends.

## Taxable-to-Total Wages Ratio

The taxable-to-total ratio is the percent of total wages against which tax rates are applied. This ratio is an important measure in program financing because it indicates cross-subsidization of program costs among the various industry groups.

Other significant factors that affect the ratio of taxable-to-total wages include seasonal employment patterns, wage levels, worker turnover, part-time and temporary worker patterns along with the business cycle.

Even though ratios differ between major industries, only relatively small changes have occurred in the relationships between the industries since the taxable wage base was indexed to wages.

This indexing has resulted in a consistent stability in the taxable-to-total ratio. Historically, the portion of total wages taxed for all Idaho industries has hovered around 67%. This stability has been maintained through periods of rapid economic expansion, deep prolonged recession, the COVID-19 pandemic, economic recovery and episodes of wage growth.

# **Average Weekly Benefit by Industry**

315.77

1986

Seasonal employment patterns and the use of part-time or temporary workers throughout the major industry groups influence average weekly benefits. This is because average weekly wages for seasonal, part-time or temporary workers tend to be less than their full-time counterparts.

125.20

39.6

Figure 3 shows the wide variation by major industry group in these averages for 2021 —from \$239 per week in accommodation and food services to \$386 per week in mining and utilities. On average, the differences among industry groups reflect worker earnings.

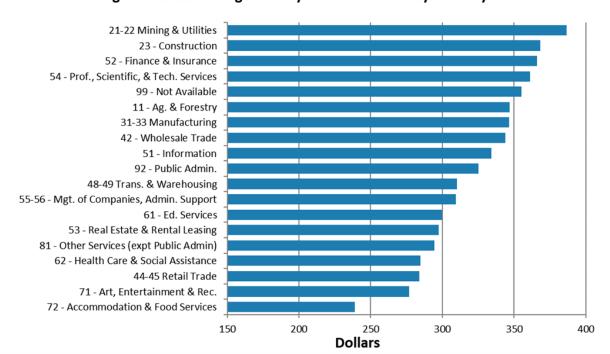

Figure 3. 2021 Average Weekly Benefit Amount by Industry Sector

#### **Average Duration of Benefits**

Benefit duration is the number of weeks a claimant draws unemployment insurance compensation. The maximum duration for any eligible claimant is determined by the ratio of the high quarter earnings to total earnings in the claimant's base period.

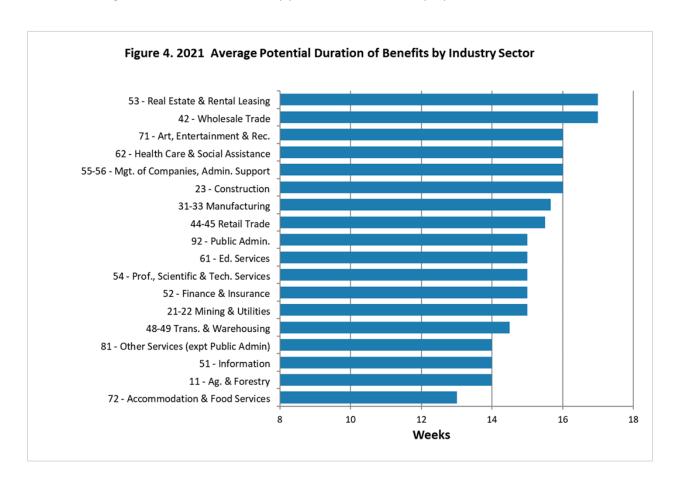

The average claimant remained on regular unemployment benefits in 2021 for 11.6 weeks, which was 5.4 weeks less than the high unemployment level of 2009. Table 4 shows the average duration of weeks compensated over the years.

| TAB              | TABLE 4. UI Regular Weeks Compensated and Average Duration |           |           |                       |  |  |  |  |
|------------------|--|-----------|-----------|-----------------------|--|--|--|--|

#### **Average Potential Benefit Duration by Industry**

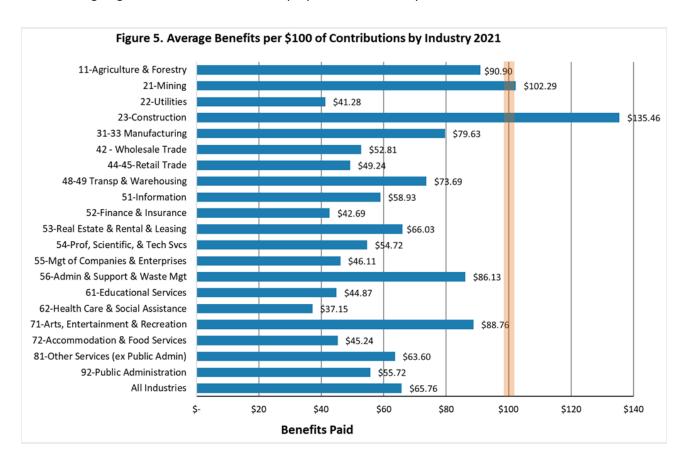

There are meaningful differences in potential duration by major industry groups. Seasonal employment patterns and the use of temporary or part-time workers are important factors.

Figure 4 shows real estate and wholesale industries with the highest average potential duration of 17 weeks. Accommodations and food services had the lowest average potential duration at 13 weeks in 2021, reflecting the more seasonal industry pattern in terms of employment.

#### **Average Contributions by Industry**

Figure 5 illustrates the average benefits paid per \$100 in contributions by industry in 2021. The industries that pay out more benefits on average than they contribute to the fund are seasonal in nature and include construction and mining industries. The industries with the lowest average benefits to contributions ratio include health care and social assistance; utilities; and finance and insurance. Of the 20 industry groups, 18 have paid more contributions into the fund than their employees received in benefits from the fund. The amount of benefits paid in the other two industries indicate those industries are receiving larger subsidies from the unemployment insurance system.

#### **Experience Rating**

A tax on the payrolls of employers covered by unemployment insurance law is the primary source of revenue for benefits. When necessary, states may borrow federal money to pay benefits. Experience rating is the process that determines the rates that individual covered employers pay on their workers.

Idaho is a reserve ratio state. Simply put, a reserve ratio is the ratio of reserve in an employer's account to the employer's average taxable payroll over the past four years.

Tax rates are calculated and assigned based on the individual employer's own benefit experience in relation to all other employers' experience. This is known as the array method. A positive experience factor means the accumulated total of taxes paid by an employer exceeds the accumulated total benefits charged against the employer. A negative experience factor means the accumulated total benefit payments charged to an employer's account exceeds the accumulated total taxes paid. New and unrated employers are assigned a standard rate.

By legislative design, most Idaho employers are positively rated (Table 5. For tax arrays distribution, see table 9 on page 20). In 2022 in particular, about 94.2% of all experienced-rated employers were assessed a positive tax rate lower than the 1% rate for new employers. The top two industries with the highest percentage of positive-rated employers were health care at 99% management of companies and enterprises at 98%. Mining and agriculture have the largest proportion of negative-rated employers at 18.5% and 15.4% respectively.

| TABLE 5. Positive and Negative Rated Employers by Major Industry Group for Year 2022 |             |      |               |      |  |  |  |

<sup>\*</sup> Excludes New Employer Accounts

#### **Experience Rating: Benefits Charged and Non-Charged**

Whether benefits are charged to any tax-rated employer account is an important factor in benefit costs and financing because non-charges are pooled, or socialized, and borne by all tax-rated employers.

Non-charges are the more common reason that benefits paid to a former employee do not increase the tax imposed on the employer. According to Idaho Code, other reasons employers are not charged include:

- Benefits paid when an employer is already at the maximum tax rate.
- Benefits paid when an employer has gone out of business.
- Benefits paid to a worker who voluntarily quits without good cause or was discharged for
  misconduct by the base-period employer. Claimants would initially be denied benefits under these
  two scenarios but could overcome this disqualification by earning 14 times their benefit amount
  at another job and then becoming unemployed through no fault of their own.
- The proportion of benefits paid to multistate claimants, also called wage combining, exceed the benefits computed using only Idaho wages.
- Benefits paid in accordance with an extended benefit program.
- Benefits paid but eligibility is subsequently reversed, with the claimant eligible for a waiver of the overpayment.
- Benefits paid to a worker who continues to work for the subject employer while receiving benefits because of layoff from another employer.

During 2021, \$89 million was paid in regular benefits, exclusively for tax-rated employers. Payments were down 60% from 2020 (\$225 million), as 2020 payments had been influenced by pandemic layoffs.

Table 6 shows the dollar amount of regular benefit payments by industry and the percentage of total regular benefit payments. The industry with the greatest regular benefit expenditures was construction. Nearly \$16 million was paid to workers in this industry.

#### **Benefit Cost Rate**

The ratio of benefits paid to total covered wages is known as the unemployment insurance cost rate. The yearly rate is computed using finalized data from two years prior. This is a useful measure in any analysis of program costs. The cost relative to total wages is a good indicator of business cycles. A higher benefit cost rate indicates a struggling economy, exemplified by the high rate in 2020 when the economy downturned due to the pandemic. Table 7 shows the benefit cost rate decreasing for Idaho in 2021 to 0.35, much less than the previous pandemic year's ratio of 0.94. Prior to the pandemic, the five-year averaged benefit cost rate was 0.40, which illustrates Idaho's quick post-pandemic recovery.

#### **Average Tax Rates**

Taxable wages are the wages that tax rates are applied against. A covered employer pays unemployment taxes on an individual worker's earnings that do not exceed the taxable wage base. Table 8 indicates the taxable wage base for 2022 is \$46,500, an increase from the 2021 base of \$43,000. The average tax rates are average rates based on taxable wages — total taxable wages divided by total taxes paid. The average tax rate estimate for all experience-rated employers in 2022 is 0.65%, higher than the 0.59% average in 2021.

Average tax rates for individual employers or subgroups of employers in broad industry categories can vary widely from the industry averages.

#### **Effective Tax Rate**

The effective tax rate is an indirect metric derived from tax rates and reflects the tax rate employers pay based on total covered wages as opposed to taxable wages. Each state in the nation has custom unemployment insurance laws to fit their needs, thus all states laws are independent from each other, and the effective tax rate metric allows for valid comparisons of tax systems among the states.

# **Coronavirus Aid, Relief and Economic Security (Cares Act)**

In March 2020, Pres. Donald Trump signed the Coronavirus Aid, Relief and Economic Security (Cares Act), which provided Americans with new and expanded unemployment benefits if they were out of work for reasons related to the pandemic.

The Cares Act was designed to mitigate the economic effects of the COVID-19 pandemic in a variety of ways. The Act included a provision of temporary benefits for claimants who had exhausted their entitlement to regular unemployment compensation (UC) as well as coverage for claimants who were

not eligible for regular UC (such as claimants who were self-employed or who had limited recent work history). *Note: traditional unemployment insurance excludes the self-employed from coverage.* The bill also allowed for the full federal funding of the waiving of the waiting week and 50 percent federal funding for cost reimbursed companies such as Government entities and nonprofit organizations.

Also in March, Governor Little issued an Executive Order which took advantage of federal flexibility and funding provided under the Families First Coronavirus Response Act. The EO waived the waiting week for claimants through the end of the year and waived the chargeability for businesses where employees were laid off due to COVID-19.

Coverage for most of the programs under Cares Act started with weeks of unemployment beginning on or after Jan. 27, 2020, and ending on or before Dec. 31, 2020. The Cares Act created temporary unemployment compensation programs, including Pandemic Emergency Unemployment Compensation (PEUC), Pandemic Unemployment Assistance (PUA) and Federal Pandemic Unemployment Compensation (FPUC). Claimants could move between regular UI and the new federal programs on a week-by-week basis as their eligibility changed.

The PEUC program extended unemployment insurance for 13 weeks to those who exhausted their Regular UC benefits. To receive PEUC, workers had to be actively seeking work. However, the bill provided flexibility in meeting such requirements in case claimants are unable to search for work because of COVID-19, including illness, quarantine or movement restriction.

The PUA program provided up to 39 weeks of unemployment benefits to individuals unemployed due to COVID-19 but not eligible for regular unemployment insurance benefits. This program covered claimants who were self-employed; independent contractors and certain gig economy workers; people who do not have enough work history to be eligible for a regular Idaho claim such as low wage, non-profit or part-time employees; and claimants denied regular benefits such as someone discharged for misconduct or quit without good cause. It also covered claimants who had exhausted all rights to regular UC, extended benefits (EB) or PEUC under state or federal law. Eligible PUA claimants were entitled to a minimum of \$168 per week, which is higher than the regular minimum weekly benefit amount of \$72.

The Cares Act allowed claimants to receive an additional \$600 weekly benefit amount (WBA) under the FPUC program if they were eligible for such compensation for a week claimed under any of the eligible unemployment benefits programs. The program ran from March 29, 2020, through July 25, 2020. Under the FPUC \$600 benefit program, 112,002 unemployed were paid an additional \$560.1 million.

In June 2020, President Trump issued a Presidential Memorandum creating the Lost Wages Assistance (LWA) program allowing for the addition of \$300 per week for compensable weeks claimed under eligible unemployment benefits programs. The program was administered by the Federal Emergency Management Agency (FEMA) using Disaster Relief Funds (DRF). Idaho participated in LWA for five weeks from July 26, 2020, to Aug. 29, 2020, and distributed \$40.7 million to 36,330 claimants.

The Cares Act programs were extended to continue past Dec. 31, 2020, for 11 weeks through the passage of the Continued Assistance Act (CAA). The CAA reinstated FPUC unemployment benefits payments for the same time period at \$300 per week instead of the original \$600, over and above state unemployment benefits.

The American Rescue Plan Act (ARPA) of 2021 authorized 29 additional weeks of FPUC, PEUC and PUA non-retroactive benefits. These benefits were only payable with respect to weeks of unemployment beginning March 14, 2021, the end of the CAA extension, through Sept. 6, 2021. The new expiration date effectively limited PEUC and PUA benefits to no more than an additional 25 weeks, a cumulative total of 49 weeks for PEUC and 75 weeks for PUA. At the end of May 2022, Idaho had 22,024 PEUC claimants who received \$88.4 million and 45,051 PUA claimants who received \$128.9 million in benefits.

Gov. Brad Little notified the US Department of Labor that Idaho would discontinue the federal programs on June 19, 2021, short of the Sept. 4, 2021, original deadline. Up to the time of the publication of this report, the federal government paid a cumulative \$957.3 million for all Cares Act programs to Idaho's unemployed, benefiting tax-rated and cost reimbursement employers alike. Due to the appeals process and changing federal guidance, some residual weekly payments are still being made a year after the end of the program.

# **Federal-State Extended Benefit Programs**

#### **Federal-State Extended Benefits**

Federal-State Extended Benefits (EB) are additional benefits available during periods of high unemployment. These are periods when the insured unemployment rate reaches 5% and is at least 120% of the average of the prior two-year insured unemployment rate. Typically, half the cost is paid by the state and half by the federal government. Extended benefits trigger off when the covered unemployment rate falls below 5% or 120% of the prior two-year average. All states must have at least one of two extended benefits trigger coded in law.

During the Great Recession, Idaho legislated temporary participation in a trigger based on the total unemployment rate while fully subsidized by the federal government.

On adoption of the optional extended benefits program, Idaho triggered extended benefits when the average three-month rolling unemployment rate hit 6.5% and was at least 110% of the average unemployment rate for the same period in either of the two previous years. Under this secondary trigger, there is a sub-trigger called a period of high unemployment (HUP) that is also based on when total unemployment rate reached 8% and is 110% greater than the corresponding rate of the prior two years. Idaho did trigger extended benefits under HUP during the Great Recession.

The duration and magnitude of the Great Recession was such that several modifications to the extended benefits were put in place throughout to allow the distribution of benefits to the long-term unemployed for as many as up to 99 weeks.

During the 2020 COVID-19 pandemic, Idaho triggered on extended benefits for up to 13 weeks of additional benefits but declined to participate in the optional total unemployment and high unemployment triggers.

Under the Cares Act, eligible claimants for Idaho's Federal-State Extended Benefit (EB) program were required to first exhaust all benefits available to them under the regular benefit program paid through the state and the PEUC program before they applied for EB benefits. If eligible, the EB program added up to 13 additional weeks of benefits. Funding for the EB program is traditionally shared between the state and federal government. However, under the Cares Act, the federal government subsidized the total cost of extended benefits paid. The weekly benefit amount available for those in EB matched the amount they were entitled to under regular state unemployment benefits. Even though the EB program ended in August 2020, some residual payments were made in the months following. The EB program covered 281 claimants and paid \$375,969 in benefits.

#### **Emergency Unemployment Compensation (UC)**

Traditionally, emergency unemployment compensation is 100% federally funded, provided such compensation is for individuals who exhaust their regular state benefits.

Due to the severity and duration of recessions, the program has gone through a multitude of extensions or benefit duration changes, which are too complex and numerous to detail, in particular those from the Great Recession.

Even though emergency compensation programs are fully funded by the federal government and do not impact the solvency level of the trust fund, some historical aspects remain relevant. Since 1961 and closing with the Cares Act ending in 2021 in about 20 occasions the state has participated in some flavor of emergency compensation or additional benefits, either for EB or in some other combination of UC (refer to Table 10).

The most recent additional compensation programs started in 2020 with the Cares Act providing additional unemployment benefits under the FPUC program in the form of \$600 and \$300 weekly checks to 21,975 people for 305,612 weeks paid in the amount of \$88,105,786.

Comparatively, during the Great Recession claimants received an extra \$25 in weekly checks.

# **Disaster Unemployment Assistance**

Disaster Unemployment Assistance is a federally financed program providing both benefits to individuals unemployed because of major disasters and money to state employment security agencies for administration.

Authorized by section 407 of the Disaster Relief Act of 1974, the program became effective April 1, 1974. The Federal Disaster Assistance administrator was responsible for administering the act and delegated to the Secretary of Labor the responsibility of administering the payment of benefits.

Since the beginning of the program, benefits have been paid to unemployed Idaho workers because of five disasters:

- The Teton Dam failure in June 1976: 3,092 Idahoans received benefit payments.
- The Mount St. Helens eruption in May 1981. The program served 128 claimants.
- The Borah Peak earthquake in October 1983. Seventeen claimants were served.
- Winter and spring flooding from high water runoff in 1997. A total of 307 claimants were served.
- In the 2000 fire season 15 counties were declared disaster areas and 55 claimants were served.

For a historical perspective on temporary and emergency benefit programs see Table 10.

| TABLE 10: Development in Temporary Extended Benefit Programs |             |                 |                   |               |  |  |  |

<sup>\*</sup>Includes FSE and High Unemployment Period (HUP).

<sup>\*\*</sup> Triggered onto Extended Benefits (EB) under the CARES Act.

#### **State Unemployment Insurance**

The state unemployment insurance non-experienced-rated system is designed to provide coverage for the unemployed from state agencies and universities. The program works on a reimbursable basis by pooling all covered employment from each of the departments, universities and commissions to effectively share the cost of unemployment coverage among agencies.

The contributions to the program are assessed on total wages using a tax rate established by the Department of Labor at the beginning of each state fiscal year.

The solvency goal for this fund is to accumulate reserves sufficient to cover 12 months of unemployment while maintaining the tax rate between 0% and 1%. See Table 11.

The Cares Act program provided cost reimbursable employers 50% of emergency relief for benefits paid for weeks claimed beginning March 13, 2020, to March 31, 2021, and subsequently increased to 75% relief from March 31 to on or before Sept. 6, 2021. Idaho ended Cares Act participation on June 19, 2021. The state fund received \$1.5 million in reimbursements in December 2021 for this program.

# **Appendix I**

# Major Historical Developments in the Benefit Formula, Eligibility Requirements and Federal-State Extended Benefit Programs

- 1938 The benefit formula put in effect in September 1938 provided for weekly benefit amounts ranging from \$5 to \$15 for three to 18 weeks. It also provided for three waiting weeks.
- 1939 In April, the maximum weekly benefit was raised to \$18, and duration changed to seven to 17 weeks. The waiting period was reduced to two weeks.
- In July, the weekly benefit was increased to a minimum of \$10 and a maximum of \$20.

  Duration was increased to 10 to 20 weeks, and the waiting period was reduced to one week.
- In May, the maximum weekly benefit was increased to \$25, and maximum duration was extended to 26 weeks.
- 1956 In July, the maximum weekly benefit was raised to \$30.
- 1957 In July, the weekly benefit was changed to a minimum of \$15 and a maximum of \$40.
- Beginning July 1, the minimum weekly benefit was raised to \$17, and the maximum weekly benefit was indexed to 52.5% of the average weekly wage. As a result, the maximum weekly benefit was raised to \$43.
  - Claimants whose earnings exceeded the amounts in the benefit table had their eligibility and number of benefit weeks computed on the same basis as individuals whose base period earnings came within the limits of the benefit table. This resulted in some claimants with very high base period earnings in the required two or more quarters being monetarily disqualified for the first time. It also resulted in reducing potential duration for those claimants with a high but disproportionate amount of earnings in one quarter.
- On July 1, the Idaho Legislature eliminated the benefit table and substituted a formula requiring at least \$416.01 of wages in a claimant's highest quarter and total wages of at least 1 ½ times the high quarter wages as a condition of eligibility. The weekly benefit equals 1/26 of highest quarter wages rounded to the next higher dollar amount, if not an even dollar amount, not to exceed the maximum weekly benefit. Duration varied from 10 to 26 weeks in two-week intervals based on ratios of base period to high quarter earnings varying from 1.25 to 3.25 in intervals of 0.25.
- 1971 The Legislature increased the maximum weekly benefit to 55% of the average weekly wage for covered employment.
- 1972 Beginning July 1, the maximum weekly benefit rose to \$68.
- 1973 The Legislature increased the maximum weekly benefit to 60% of the average weekly wage in covered employment.
- 1974 The Emergency Unemployment Compensation Act of 1974, as amended in 1975 and 1977, provided Federal Supplemental Benefits of up to 26 weeks to claimants who exhausted their regular and Federal-State Extended benefits. Idaho first triggered this federally funded program

- on Jan. 4, 1975, with payments continuing through October 1976. This federal program triggered on again in January 1977, ending on Jan. 31, 1978. The program paid \$5,280,600 to recipients in Idaho. No portion of this amount was paid from Idaho's trust fund.
- The Legislature deleted weekly benefit amounts of \$17 through \$35 from the benefit formula, raised the required high quarter earnings from \$416.01 to \$910.01 and raised total wages required as a condition of eligibility from \$520.01 to \$1,137.51.
- Additional Extended Benefits became effective March 7, 1982, and provided benefits to Idaho claimants who exhausted both regular and Federal-State Extended benefits. The law, enacted by the Idaho Legislature in 1982, was a one-time extension of benefits that expired December 31, 1982. While in effect, this program paid out \$5,458,973 in benefits.
- Federal Supplemental Compensation was a temporary extended benefit program wholly funded by the federal government. The law creating the program took effect Sept. 12, 1982. The original expiration of March 31, 1983, was extended several times. To be eligible, a claimant must have exhausted all compensation under the regular and Federal-State Extended benefit programs. From the beginning date on Sept. 12, 1982, through July 1985, the program paid \$37,950,846 in benefits.
- 1983 Idaho's benefit formula underwent the most extensive, far-reaching changes in its history in response to the recessionary drain on the trust fund. The Legislature made substantive changes that significantly affected claimants' eligibility for benefits, benefit amounts and duration of benefits. The act:
  - Changed the earnings required from eight times the weekly benefit amount to 20 times.
  - Changed monetary eligibility requirements for an individual to at least \$1,144.01 earned in a calendar quarter in the base period and total base period wages of at least 1½ times the high quarter wages.
  - Raised the minimum weekly benefit to \$45 from \$37 and shortened the potential duration of benefit payments for most claimants.
  - Froze the maximum weekly benefit at the July 1982 level of \$159 through at least June 30, 1984, and until July 1 of a year that the trust fund has not borrowed to pay benefits for the two preceding quarters. This condition was met July 1, 1984, and the maximum weekly benefit was raised to \$173 under the benefit formula.
  - Rounded to the next lower dollar unemployment compensation if not an even dollar amount that is payable to any individual for any week. This provision results in savings to the fund and slightly reduced benefit amounts for almost all of those receiving benefits.
  - Changed from three to 5 ½ times the weekly benefit amount established during the first benefit year to be eligible for a second successive year of benefits.
- 1985 The "20 times" requirement passed in 1983 to re-establish eligibility for benefits was changed to "16 times" the weekly benefit amount.
- Effective July 1, the earnings eligibility requirement dropped from 1½ times the high quarter of base period wages to 1¼ times. Claimants becoming eligible with the restoration of the "1¼ times" provision were entitled to 10 weeks of benefits while all other entitlements were increased by one week except for those claimants who were entitled to the maximum 26 weeks. The eligibility criterion for Federal-State Extended Benefits remained at 1½ times the high quarter wages.

- 1997 The Legislature changed the benefit formula to restore the benefit entitlement to pre-1983 levels by adding one week of eligibility for most claimants. All claimants except those eligible for 10 weeks and 26 weeks became eligible for one additional week of benefits.
- The Legislature indexed the wage required to qualify for the minimum weekly benefit to 50% of the state minimum wage. Because Idaho's minimum wage was \$5.15 per hour, Idaho's minimum weekly benefit increased from \$44 to \$51. The re-qualification formula when filing for benefits in a subsequent benefit year was raised from 5.5 times the weekly benefit amount to six times.
- The Legislature clarified that disqualification for making a false statement applies only to those intentionally falsifying data.
- The loss of employer appeal rights for failing without good cause to provide separation information within 10 days was repealed.
- 2005 Benefit and tax programs are revised under unanimous approval by the Legislature. Some key changes to the benefits program included
  - Duration of benefits was modified to be calculated weekly rather than biweekly between 10 and 26 weeks.
  - To be eligible for any week of benefits or waiting week credit, claimants must be able to
    work, available for work and seeking work unless sick, disabled or responding to a
    compelling personal circumstance that does not exceed a minor portion of the week in
    question.
  - Penalties for overpayments due to false statements, misrepresentations or omission of facts were increased to 25% of the overpayment for the first offense, 50% for the second offense and 100% for the third and subsequent offenses. All judgments for overpayments become liens.
  - The penalty for employers failing to file quarterly taxes and reports on time was set at 100% of the tax amount or \$250, whichever is more. This law affected the benefit formula. The maximum weekly benefit floats annually between 52% and 60% of the average weekly wage. As tax rates increase, the maximum benefit decreases, and vice versa.
- The Legislature matched the state minimum wage to the federal minimum wage, which was increasing in three steps through 2009. As a result, the minimum weekly benefit amount increased from \$51 to \$58 in 2008, to \$65 in 2009 and to \$72 in 2010.
- 2008 Legislation maintained the confidentiality of benefit fraud whistleblowers in the files of affected claimants, and new civil penalties following federal direction were adopted for unauthorized disclosure of employment security information.

The reasons for claimants failing to attend approved training without loss of benefits were limited to illness, disability in certain circumstances and compelling personal circumstances.

The penalty for employers failing to file quarterly taxes and reports on time was reduced from 100% of the tax owed or \$250 to 25% of the tax or \$75 for the first offense, 50% or \$150 for the second offense and 100% or \$250 for the third and subsequent offenses.

- The Legislature implemented a series of changes in benefit provisions to qualify for a one-time Reed Act distribution of \$32 million under the federal modernization program. The changes included:
  - Part-time benefit eligibility. Allows claimants laid off from part-time work to remain eligible for unemployment insurance coverage if they seek only part-time work of 20 hours a week or more.
  - Benefit eligibility during training. This amendment doubles the benefit entitlement up to 26 additional weeks only for claimants in approved training.
  - Alternate base period. A claimant found monetarily ineligible based on earnings in the first four of the previous five completed quarters can have eligibility calculated on the last four completed quarters.
  - Total unemployment rate trigger. Uses the total unemployment rate to trigger Federal-State Extended benefits when the federal government covers 100% of the cost.
  - The definition of employment was revised to exclude individuals selling consumer products from other than a permanent retail establishment.

Federal Additional Compensation (FAC) was a 100% federally financed \$25 increase in weekly unemployment benefits for all programs from Feb. 22, 2009, through Dec. 4, 2010. Claimants with benefit years beginning after May 30, 2010, were ineligible for the additional \$25. By the end of the FAC, Idaho claimants received \$96.4 million through that program.

- Existing law was amended to reduce the amount of benefits paid in a compensable week by the amount equal to temporary disability benefits under a worker's compensation law. This change relates to supplanting the UI benefit dollar by dollar with temporary disability benefits. The duration schedule was modified to redistribute benefits from claimants with volatile earnings to those with more stable earnings during the base period. Existing laws were added or amended to define when corporate officers are unemployed and to allow corporations to exempt corporate officers from unemployment insurance coverage.
- The 2011 Revision of the Unemployment Insurance Benefit and Tax Program added a new Idaho Code Section 72-1351B which spelled out a federal conformity provision prohibiting relief from liability. New Idaho Code Section 72-1369 outlined overpayments, civil penalties and interest collection and waiver.
  - Existing law was amended to add an additional temporary total unemployment rate indicator for extended benefits that qualify for federal funds for employment security law purposes.
  - Existing law was amended to clarify that 15% of certain overpayments must be paid into the Employment Security Fund.
- 2015 Existing law was amended to provide an additional circumstance for exempt employment under the state's employment security law regarding motor carriers and motor vehicles.
- Terminology and provisions regarding the base tax rate were revised. The maximum weekly benefit amount was revised to be 55% of the average wage paid by covered employers.

  Maximum weeks of benefits were revised to be between 20 to 26 weeks depending on Idaho's unemployment rate.

- Due to the COVID-19 pandemic, Executive Order 2020-11 provided a temporary suspension of certain state's employment security laws governing unemployment benefits to include waiving of the waiting week effective March 8, 2020, through Jan. 2, 2021. Claimants and employers are granted an additional 14 days for all appeals filed.
- The Cares Act was passed by Congress and signed by President Donald Trump on March 29, 2020. Idaho Labor Department signed on to these programs under an agreement with the US Department of Labor. This act provided for:
  - Pandemic Unemployment Assistance (PUA) effective March 29, 2020. PUA is a federal program that allows those individuals usually not eligible for UI to receive benefits (selfemployed, monetarily ineligible, those that are not working due to COVID-19). The claimant must be unemployed due to the COVID-19 pandemic.
  - The Federal Pandemic Unemployment Compensation (FPUC) effective March 29, through July 26, 2020, providing an additional \$600 per week to all eligible weeks.
  - The Pandemic Emergency Unemployment Compensation (PEUC) effective March 29, 2020, providing additional unemployment payments to those who had exhausted all regular UI benefits.
- 2020 Idaho pays Extended Benefits June 8 through Aug. 22 due to the rise in the unemployment insurance rate.
- As of June 19, the Department no longer reviews all separations within the 14 times the claimant's weekly benefit amount. Only the last separation is adjudicated. Requalification is still 14 times the claimant weekly benefit amount.
- The Lost Wages Assistance (LWA) program begins on July 26 and runs through Aug. 29, 2020. The LWA program added an additional \$300 per week for each payment.
- On Nov. 29 the Department begins requiring claimants to go through ID.me, Labor's identity proofing partner, to combat the high volume of attempted fraudulent claims.
- The President signs the Continuing Assistance Act on Dec. 27 which extends the Cares Act programs through March 13, 2021. PUA goes from 39 to 50 weeks. PEUC goes from 13 to 24 weeks. FPUC was reinstated with payments of \$300 per eligible week.
- The President signs the American Rescue Plan Act of 2021 on March 11, which further extends the Cares Act programs to September 4, 2021. PUA is capped at 75 weeks, PECU at 49 weeks and FPUC continues at \$300 per eligible week.
- Gov. Brad Little announces on May 11 that Idaho will stop participating in the Cares Act programs effective June 20.
- Statute was changed effective July 1 establishing a four-week cap on the illness provision, which allows individuals who became ill after filing their claim, to still receive benefits.
- 2021 ID.me, the Department's identity proofing partner, is fully implemented as of July 7. All claimants must go through ID.me to access the Claimant Portal. If a claimant is unable/unwilling to go through the ID.me process, the claim will be processed manually, and the claimant will not be able to have direct deposit.

Table 12 provides a current and historical perspective for the benefit structure.

| Table 12. Developments in Idaho Benefit Formula |             |             |                  |               |  |  |
|---|-------------|-------------|------------------|---------------|--|--|
| Effective<br>Date                               | Maximum WBA | Minimum WBA | Duration (weeks) | Waiting Weeks |  |  |

| 7/1/1993  | 234         | 44          | 10-26            | 1             |  |  |
| 7/1/1992  | 223         | 44          | 10-26            | 1             |  |  |
| 7/1/1991  | 215         | 44          | 10-26            | 1             |  |  |
| 7/1/1990  | 206         | 44          | 10-26            | 1             |  |  |
| 7/1/1989  | 200         | 44          | 10-26            | 1             |  |  |
| 7/1/1988  | 193         | 44          | 10-26            | 1             |  |  |
| 7/1/1987  | 188         | 44          | 10-26            | 1             |  |  |
| 7/1/1986  | 185         | 44          | 10-26            | 1             |  |  |
| 7/1/1985  | 179         | 44          | 10-26            | 1             |  |  |

<sup>\*</sup> Maximum Weeks of Benefits will be between 20 to 26 weeks depending on Idaho's Unemployment Rate.

<sup>\*\*</sup> Waiting Week partially suspended by the Governor's executive order while under CARES Act.

# **Appendix II**

## Major Developments in Employer Experience Rating and Tax Provisions

1935 Tax rates were applied to total wages paid by employers. All employers paid the same rate.

1936 0.9% 1937 1.8% 1938 -1942 2.7%

- Only the first \$3,000 of employee's wages were subjected to the annual tax. Experience rating procedures, provided first in 1943, have used different bases for rating employment experience. The 1943 law used a ratio of the excess of taxes over benefits to average annual payroll and set up steps of 2.3%, 1.9% and 1.5% for rated employers.
- 1947 A 1.1% tax rate step was added.
- The array method of reserve ratio experience rating was instituted to determine employers' tax rates. Each eligible employer has an experience factor calculated based on past experience. This factor is the reserve ratio of the accumulated excess of contributions over benefits divided by average taxable payroll for the past two, three or four years, depending on the length of time an employer has been in business. Employers are arrayed according to their experience factors. The Employment Security Law provides the percentage of taxable payroll to be assigned to each rate group. Those employers with the most favorable experience factor receive the lowest rate, and other employers are rated according to their place in the array. The range of rates and the percentages in each rate group have been changed several times by legislative action.
- The Legislature established five alternate tax tables with minimum tax rates ranging from 0.3% to 1.7%. The rate schedule in effect at any period was determined by the ratio of the unencumbered balance in the Unemployment Insurance Trust Fund to total taxable payroll.
- 1961 For 1961 and 1962 only, a 25% surtax was added to the rates of Table 4 of the 1955 law. This resulted in effective rates of 1.625% to 3.375% for 1961 and 1962. This surtax was prompted by depletion of the trust fund during the 1960-1961 recession.
- 1963 The Legislature amended the Employment Security Law to provide:
  - Deficit rates above a standard rate for employers whose benefit charges exceed their taxes paid.
  - That the tax schedule for a particular rate year is determined by the ratio of fund balance to total wages.
  - Eight alternative tax schedules, each with seven rates for positive-rated employers, six rates for deficit employers and a standard rate for unrated employers. Schedule I varied from 0.3% to 3.9% while Schedule VII varied from 2.7% to 5.1%. The taxable wage base was raised from \$3,000 to \$3,600.
- 1971 The taxable wage base was increased from \$3,600 to \$4,200 effective Jan. 1, 1972.
- The wage base became the same as the annual average wage rounded to the nearest \$600 multiple for covered employment in the second year prior to the effective date. Effective January 1976, the taxable wage base increased to \$7,800. The tax schedules were adjusted so

that effective January 1976 Schedule I varied from 0.2% to 3.2% and Schedule VIII varied from 2.7% to 4.4%.

The Legislature adopted through 1985 nine positive-rated tax schedules, instead of eight and five deficit-rated tax schedules and increased the rates employers pay. Rate Schedule VI would be in effect for 1983, Rate Schedule VII for 1984 and Rate Schedule VIII for 1985.

The 1985 Legislature modified its 1983 decision and made Rate Schedule VI effective for both 1985 and 1986.

- The Legislature added a new rate class on all schedules for the most deficit employers. About 1% of all deficit-rated employers would pay 5.4% in the most favorable rate schedule and 6.8% in the least favorable schedule. The definition of wages was changed to include sick pay other than workers' compensation benefits and tips totaling \$20 or per month, detailed in a written statement from the claimant to the employer. Any employer making a sickness or accident disability payment that is not excluded from wages will be treated as the employer with respect to payment of such wages. The law does not charge benefits paid to an individual who continues to perform services for an employer without a reduction in work schedule and is eligible to receive benefits based on earnings from another employer.
- The Legislature changed the computation that determines which rate schedule will be in effect. The ratio of the unencumbered balance in the trust fund to the total wages on June 30 immediately preceding the rate year determines the appropriate rate schedule beginning in 1989. This moved the computation date forward six months from Dec. 31 of the second prior year to June 30 immediately preceding the rate year.
- The Legislature created an innovative method of determining the annual rate schedule. This method computes from the penultimate year of an average cost multiple, which is a 10-year moving average of the ratios of annual benefits paid to total wages in covered employment multiplied by 1.5. This resulting ratio, when applied to covered wages of the penultimate year, represents the desired fund size.

Beginning in 1989, the average cost multiple became the minimum ratio of total wages for Rate Schedule V, the middle of Idaho's nine rate schedules. The trust fund balance to wages ratio for Rate Schedules I through IX is then adjusted up or down from Rate Schedule V in equal increments of 0.005%.

As an example of the new methodology, the average cost multiple for 1989 was 0.0264, and the ratio of fund balance to total wages in the penultimate year, 1987, was 0.0400, which triggered Rate Schedule III for 1989.

One effect of the change was to return the point in time of the computation of the effective tax rate schedule to the penultimate year as it was prior to the 1987 legislation.

The Legislature established an administrative fund to help meet Idaho Department of Employment (as the Department of Labor was known at the time) operating expenses. The fund was financed by a reserve tax equal to 20% of the employers' taxable wage rate and invested by the state treasurer. The reserve fund may be used for loans to the employment security fund and the repayment of interest-bearing advances and accrued interest. The state treasurer deposits the interest earned by the reserve fund in the special administrative fund to be used by the Idaho Department of Labor for administering the unemployment insurance and employment services programs.

The Legislature limited the 20% diversion of employer taxes to only those years when the balance of the Administrative Fund was less than 1% of Idaho taxable wages and less than half the balance of the Unemployment Insurance Trust Fund. The 20% diversion of employer taxes would be collected in combination with the remaining 80%, which is deposited in the Unemployment Insurance Trust Fund. When the Administrative Fund ceiling is reached, 100% of all employer taxes are deposited in the trust fund.

In calculating an individual employer's reserve ratios, only taxes will be used in those years when the 20% diversion is in effect.

The combination of the trust fund and the newly established reserve fund would be used to compute the minimum ratio of the fund balance to total wages, which is used to determine which of Idaho's nine rate schedules are in effect for any particular rate year. The effective date for implementing this legislation was Jan. 1, 1991.

- The Legislature removed the expiration date on Idaho's special Administrative Fund and changed the computation date for determining which of Idaho's rate schedules will be in effect from Dec. 31 to Sept. 30, which permitted tax rate notices to be sent to employers earlier.
- The Legislature established the Workforce Development Training Fund with a training tax equal to 3% of the taxable wage rate in effect each year. As a result, unless a reserve tax is imposed, unemployment insurance taxes equal 97% of the taxable wage rate.

The legislation also changed the reserve tax established in 1991 from 20% of the taxable wage rate to 17%. Accordingly, when the 17% reserve tax is in effect, the training tax equals 3% of the taxable wage rate and the balance, 80%, goes to contributions.

- The Legislature cut 1997 taxes for Idaho's experience-rated employers by reducing the taxable wage base to \$21,000 from the \$22,800 that the index formula dictated. It also put Rate Schedule I in effect instead of Rate Schedule II, which was dictated by the formula. This change resulted in a 0.04% reduction in tax rates for all rate classes except the 5.4% rate class. These changes rolled back the taxable wage base and tax schedule to 1995 levels.
- The Legislature made substantive tax schedule changes by removing the highest two tax schedules and adding two lower schedules. Lawmakers lowered the standard rate for new employers on all schedules, reduced tax rates for most positive-rated employers, changed the percentage distribution in the array of taxable payroll that places employers in each rate class, reduced the percentage allocation of change for positive-rated employers when they move from one rate class to another and increased the percent of taxable payroll in the highest deficit tax rate from 1% to 5%.
- 2001 The Legislature froze the 2002 tax rates at the 2001 level Rate Schedule II.

The interest payment provisions for federal loans were changed to make it an option rather than a requirement for the director to levy a tax on experience-rated employers to pay loan interest.

The Legislature continued the freeze at Rate Schedule II and the taxable wage base at \$27,600 for rate years 2003 and 2004 and ultimately extended the freeze until the first half of 2005 for an average effective rate of 0.8%. Employers continued to experience rate increases and decreases as they moved up and down the rate classes under the experience-rating methodology.

- The taxable wage base was frozen at \$27,600 for 2003 and 2004. Tax rates of 0.2% to 1.4% were assigned to positive-rated employers and 2.6% to 5.4% for negative-rated employers.
- 2005 Benefit and tax program are revised under unanimous approval by the Legislature. Some key changes to the tax program included
  - Every covered employer must register with the department within six months of becoming a covered employer.
  - The formulae were revised for calculating the average high-cost ratio, the average high-cost multiple, the benefit cost rate, the fund balance ratio, the base tax rate and the taxable wage rate. The criteria are set out for assigning taxable wage rates and contribution rates to employers.
  - Jeopardy assessments including penalty and interest are subject to immediate seizure as well as other lawful collection procedures and are binding unless employers appeal within 14 days.
  - Chargeability of benefits to an employer's account becomes final unless appealed within 14 days.

The Legislature lowered trust fund adequacy measure with the Equitable and Proportional Model that triggers a more responsive tax structure using a mathematical equation to compute tax rates instead of the current tax schedule. This equation increases equity by implementing the same percentage tax rate changes for all employer rate classes. This change is phased in over three years by fixing the rates for 2005 and 2006. In 2007, the formula determined the rates under the Equitable and Proportional Model.

Penalties for fraud were increased to stop the practice of State Unemployment Tax Act, or SUTA, dumping — the manipulation of the tax system to obtain a lower tax rate. The primary methods of dumping are setting up shell companies to transfer payroll from the businesses with poor experience rating to new companies with the lower standard tax rate. A few low-turnover positions are transferred to the shell companies until a new lower tax rate is achieved. Then, the company can transfer the remaining employees.

The unobligated balance of the Workforce Development Training Fund was capped to prevent the fund from becoming excessive during economic downturns. Funds over the cap are transferred to the Unemployment Insurance Reserve Fund.

The Legislature overrode the trigger criteria to allow a one-time tax diversion to reinforce the Reserve Fund. As a result, 17% of taxes were diverted from the employment security fund.

For reimbursable employers, refunds can be made when yearly contributions exceed benefit payments and tax rates will be raised to compensate when benefit payments exceed contributions.

The Legislature amended the civil penalty structure for employers who willfully fail to file timely quarterly wage reports. Monetary penalties of the greater of \$75 or 25% of the amount due are assessed against employers failing to file a timely report the first time, \$150 or 50% for the second time and \$250 or 100% for the third and subsequent times. If the employer has filed timely for the preceding 16 quarters, the penalty reverts and begins at \$75 or 25%.

- In cases where employers collude with employees to defraud the benefit system, a penalty of 10 times the employees' weekly benefit amount will be added to the liability of the employer in addition to other penalties provided by law.
- The multiplier used to determine the target balance of the trust fund was increased in stages from 0.8 to 1.5 beginning in one-tenth increments in 2012, reaching the 1.5 level in 2018.

  Professional employer organizations were subjected to a fine of \$25 per client up to \$5,000 per quarter for every client they failed to provide full wage and employment reports on.
  - The formula for triggering Federal-State Extended Benefits under the total unemployment rate was revised. Benefits are to be paid when current rates are 110% of the three-month average for the third preceding year.
- 2011 Existing law relating to the Employment Security Law was amended to allow the Department of Labor to revise the ratios of total base period earnings to the highest quarter earnings. This allowed for the adjustment of weeks of entitlement for employment security law purposes.
- 2018 Idaho Code was amended to reduce the taxable wage rate used for determining employers' unemployment insurance by adjusting the unemployment fund multiplier downward to one and three-tenths (1.3).
- 2020 Legislation passed to allow the Department to relieve charges to the employer's account when the claimant has good cause reasons for quitting their employment, but the employer wasn't the cause for the person quitting, and to give corporate officers greater flexibility when deciding whether to exempt themselves from unemployment insurance coverage or to remain covered.
- Governmental entities and nonprofit organizations were relieved of 50% of charges from March 15, 2020, through March 14, 2021. Charges were relieved at 75% from March 15, 2021, through June 19, 2021. This was all federally funded through the Cares Act and subsequent legislation.
- 2020 Executive Order 2020-11 temporarily suspended regular unemployment benefits charges related to COVID-19 from experience-rating to minimize the impact of the pandemic on the upcoming employer tax rates for 2021.
- 2020 Prior to tax rates computation for 2021, Gov. Brad Little authorized a \$200 million State Cares Act deposit to the trust fund to prevent a significant increase in rates from pandemic related claims.
- Legislation passed defining custom farming as "agricultural employment" rather than "general employment" and reduced the timeframe new employers need to pay taxes before qualifying for a reduced unemployment insurance tax rate.
- 2022 Legislation froze the 2021 tax rate for 2022 and 2023. The tax formula in code, takes into consideration the cost of providing benefits by looking back over the past 20 years of costs on a rolling years system. Because of this system, over the next two years the high-cost years from the 2001-2002 recession will no longer be a component affecting the tax rate calculation. Freezing the rate prevented an increase in rates followed by a significant decrease. Instead, rates will be stable over the three years and the UI Trust Fund remains solvent.

Table 13 provides some historical perspective of the development in unemployment insurance tax rates and the taxable wage base in Idaho.

| Table 13. Unemployment Insurance Tax Rates and Taxable Wage Base |                |                        |                        |  |  |  |
|--|----------------|------------------------|------------------------|--|--|--|
| Year Law Passed or<br>Administrative Order<br>Issued             | Effective Date | Rate Schedules Percent | Taxable Wage Base (\$) | Eligibility Requirements for Experience Rating |  |  |
| 2022   | Jan-22         | .207 - 5.4             | 46,500                 | 6 Quarters                                     |  |  |
| 2021   | Jan-21         | .207 - 5.4             | 43,000                 | 6 Quarters                                     |  |  |
| 2020   | Jan-20         | .255 - 5.4             | 41,600                 | 6 Quarters                                     |  |  |
| 2019   | Jan-19         | .251 - 5.4             | 40,000                 | 6 Quarters                                     |  |  |
| 2018   | Jan-18         | .269 - 5.4             | 38,200                 | 6 Quarters                                     |  |  |
| 2017   | Jan-17         | .399 - 5.4             | 37,800                 | 6 Quarters                                     |  |  |
| 2016   | Jan-16         | .425 - 5.4             | 37,200                 | 6 Quarters                                     |  |  |
| 2015   | Jan-15         | .453 - 5.4             | 36,000                 | 6 Quarters                                     |  |  |
| 2014   | Jan-14         | .545 - 5.4             | 35,200                 | 6 Quarters                                     |  |  |
| 2013   | Jan-13         | .786 - 6.8             | 34,800                 | 6 Quarters                                     |  |  |

| 2011   | Jan-11         | .960 - 6.8             | 33,300                 | 6 Quarters                                     |  |  |
| 2010   | Jan-10         | .960 - 6.8             | 33,300                 | 6 Quarters                                     |  |  |
| 2009   | Jan-09         | .447 - 5.4             | 33,200                 | 6 Quarters                                     |  |  |
| 2008   | Jan-08         | .262 - 5.4             | 32,200                 | 6 Quarters                                     |  |  |
| 2007   | Jan-07         | .372 - 5.4             | 30,200                 | 6 Quarters                                     |  |  |
| 2006   | Jan-06         | .477 - 5.4             | 29,200                 | 6 Quarters                                     |  |  |
| 2005   | Jan-05         | .429 - 5.4             | 28,000                 | 6 Quarters                                     |  |  |
| 2004   | Jan-04         | .1 - 6.8               | 27,600                 | 6 Quarters                                     |  |  |
| 2003   | Jan-03         | .1 - 6.8               | 27,600                 | 6 Quarters                                     |  |  |
| 2002   | Jan-02         | .1 - 6.8               | 27,600                 | 6 Quarters                                     |  |  |
| 2001   | Jan-01         | .1 - 6.8               | 25,700                 | 6 Quarters                                     |  |  |
| 2000   | Jan-00         | .1 - 6.8               | 24,500                 | 6 Quarters                                     |  |  |
| 1999   | Jan-99         | .1 - 6.8               | 23,600                 | 6 Quarters                                     |  |  |
| 1998   | Jan-98         | .1 - 6.8               | 23,000                 | 6 Quarters                                     |  |  |
| 1997   | Jan-97         | .1 - 6.8               | 21,000                 | 6 Quarters                                     |  |  |
| 1996   | Jan-96         | .1 - 6.8               | 21,600                 | 6 Quarters                                     |  |  |
| 1995   | Jan-95         | .1 - 6.8               | 21,000                 | 6 Quarters                                     |  |  |
| 1994   | Jan-94         | .1 - 6.8               | 20,400                 | 6 Quarters                                     |  |  |
| 1993   | Jan-93         | .1 - 6.8               | 19,200                 | 6 Quarters                                     |  |  |
| 1992   | Jan-92         | .1 - 6.8               | 18,600                 | 6 Quarters                                     |  |  |

# **Appendix III**

## **Major Historical Developments in Coverage Provisions**

- 1935 Covered employment is defined as any service performed for wages unless specifically excluded in the law. The major exclusions in the 1935 Idaho law, which was written to comply with federal standards, were jobs in agriculture, government, nonprofit organizations, domestic work and jobs held by certain family members. There were numerous other exclusions, but these affected a relatively small number of workers.
- 1959 Major changes added city, county and most state workers. The latter group was included in covered employment from January 1962 to April 1963.
- 1963 City and county government workers were removed from coverage. Benefits paid to former state employees were on a reimbursable basis and therefore, did not directly affect the Unemployment Insurance Trust Fund.
- Idaho law has, almost from the beginning, covered workers in firms employing one or more workers, provided that the quarterly payroll met the legal minimum. Federal standards originally required coverage by firms with eight or more workers. This was later reduced to four or more workers and finally, to firms with one or more workers. In 1937, the Idaho minimum quarterly payroll subject to taxes was \$75. This was raised to \$150 in July 1955 and to \$300 in July 1967.
- 1972 Coverage in Idaho was again broadened to all faculty members and administration officials of state-operated schools. Workers packaging fresh fruits and vegetables and haulers of farm products, previously classified as agriculture workers, were reclassified to food processing and transportation and also became covered. Most services for nonprofit organizations are covered including employees of all hospitals.
- 1978 Coverage was extended to local government workers, domestic workers and agriculture workers. The minimum quarterly payroll for domestic workers was set at \$1,000 in any quarter of the preceding calendar year. Agriculture workers are covered if their employers paid \$20,000 or more in wages in any one quarter or if they employed at least 10 workers in agricultural labor for 20 days during the year.
- Benefits between terms and during vacation period were denied to individuals employed by any educational service agency.
- 1986 The minimum quarterly payroll requiring taxes to be paid was raised from \$300 to \$1,500.
- 1997 Professional employer organization experience rating legislation allows professional employer organizations to use the experience rate of the businesses with which they are contracting. Services by AmeriCorps program participants are exempt from coverage.
- The legislature limits the amount of charges against an employer account when claimants in approved training fail to accept suitable work offers from the charged employer. The benefit charges at that point become socialized for purposes of experience rating.

The Cares Act program Pandemic Unemployment Assistance (PUA) expanded fully subsidized unemployment insurance coverage to self-employed who lost jobs because of the COVID-19 pandemic. The minimum amount of benefits paid to each self-employed claimant ranged from \$168 to the normal maximum benefit amount set in place for the traditional claimant population.

Table 14 provides the historical impact of changes in minimum wage law for unemployment insurance benefits.

| Table 14. Changes in Minimum Wage for Unemployment Insurance Benefits |                               |                           |  |  |  |
|---|-------------------------------|---------------------------|--|--|--|
| Effective Date  | Size of Firm                  | Minimum<br>Quarterly Wage | Coverage Change  |  |  |
| 1/1/2010  | 1 or more                     | 1,872                     |  |  |  |
| 1/1/2009  | 1 or more                     | 1,690                     |  |  |  |
| 1/1/2008  | 1 or more                     | 1,508                     |  |  |  |
| 7/1/1998  | 0 or more                     | 1,326                     | Minimum quarterly wage indexed to minimum wage   |  |  |
| 1/1/1979  | 1 or more                     | 300                       | Added local government workers, domestic workers and agriculture workers   |  |  |
| 1/1/1972  | 1 or more                     | 300                       | Added school coverage for state universities and administrative staff, professional staff of state hospitals, employees of most nonprofit organizations and some food processing and transportation workers, who were previously classified as agriculture workers |  |  |
| 7/1/1967  | 1 or more                     | 300                       |  |  |  |
| 5/1/1963  | 1 or more                     | 150                       | Removed coverage for city and county government workers  |  |  |
| 1/1/1962  | 1 or more                     | 150                       | Added city and county government workers   |  |  |
| 7/1/1959  | 1 or more                     | 150                       | Added state employees, except school faculties, elective and some medical specialists  |  |  |
| 7/1/1955  | 1 or more                     | 150                       |  |  |  |
| 7/1/1947  | 1 or more in each of 20 weeks | 78                        |  |  |  |
| 1/1/1939  | 1 or more                     | 78                        |  |  |  |
| 6/18/1935   | 1 or more                     | 1,500                     |  |  |  |
| 4/20/1935   | 1 or more                     | 75                        |  |  |  |
| 4/19/1935   | 8 or more in each of 20 weeks |                           |  |  |  |
